Disclaimer

The data, views and forecasts in this document is for information purposes only and shall not be regarded as an offer, solicitation or recommendation for an investment. Past performance is no guarantee of future results. All investments involve risks including the risk of possible loss of principal. The market value of a Fund's portfolio may decline as a result of a number of factors, including adverse economic and market conditions, prospects of securities in the portfolio, changing interest rates, and real or perceived adverse competitive industry conditions. The Fund invests in securities and other investments that may be illiquid, which hold the risk that the securities will not be able to be sold at the time desired by the Fund. The Armenian securities markets have substantially less trading volume than the securities markets of OECD countries. Additionally, the capitalization of the Armenian securities markets is highly concentrated. This combination of lower volume and greater concentration in the Armenian securities markets may create a risk of greater price volatility than in the securities markets of developed economies. The views and forecasts contained herein are those of the GLOCAL team based on information that they believe to be reliable. These opinions may change over time.

MACROECONOMIC UPDATE

In November 2025, HY/HG eurobond market saw mixed but generally stable performance. Around 60% of USD-denominated bonds gained, with IG again outperforming HY (about 72% vs. 54%) amid cautious sentiment and limited macro visibility. U.S. Treasury yields moved slightly lower, extending October's curve-flattening trend: the 2-year stayed near 3.47%, while the 10-year drifted toward 3.78%, reflecting softer inflation expectations and rising confidence in potential Fed easing.

U.S. labor-market visibility remained constrained by data delays. The official November employment report was postponed, while private indicators pointed to moderate hiring. With uncertainty still elevated, the Federal Reserve left policy unchanged, and markets continued pricing in higher odds of 2026 rate cuts. The ISM Services Index remained firmly in expansion, signaling steady but subdued U.S. activity.

Globally, the IMF maintained its 2025 growth forecast at 3.0%, supported by emerging markets. In Europe, the ECB kept its policy rate at 2.0%, citing stable services and weak industrial output. Euro-area sovereign yields held broadly steady, with the 10-year benchmark near 3.10%.

Emerging Asia showed continued divergence: China's manufacturing remained in contraction amid soft domestic demand and external pressures, while India sustained resilient momentum, still targeting close to 8% GDP growth despite tariff-related headwinds.
